

Replicon Connector for Microsoft Project

Seamless integration for a unified project management experience

Key Capabilities

- ▶ Auto-create Projects and Tasks in Replicon
- ▶ Sync project time back to Microsoft Project
- ▶ Sync Resource Assignments to Replicon
- ▶ Turnkey, pre-built, and easy to implement
- ▶ Compatible with Microsoft Project 2010 and 2013

Many organizations use Microsoft® Project to plan and manage projects. While it's an effective tool to help project managers track project tasks and milestones, it falls short when it comes to tracking resource time since employees find it difficult to use and it doesn't provide sufficient validations to ensure accuracy. Because it can't reliably track time spent on projects or provide a global view into all resources, project managers lack visibility into how project costs are progressing against budget, or whether they are under- or overstaffed. Replicon augments Microsoft Project by providing an easy-to-use cloud-based solution to accurately track employee time against projects for more reliable budget-to-actuals reporting.

Get more out of Microsoft Project with Replicon

With the Replicon Connector for Microsoft Project, project managers now have a seamless way to integrate data from Microsoft Project into Replicon to ensure streamlined, successful end-to-end project management.

Project managers can continue to create all tasks and projects in Microsoft Project and easily sync that data to Replicon, eliminating double entry. Users can then enter time against projects in Replicon and sync that data back to Microsoft Project to ensure that accurate, up-to-date time and cost information is reflected in the projects. The real-time visibility gained by project managers ensures they can easily track resources and costs, see at a glance if things are on or off track, compare baseline execution against the plan, and forecast for future planning.

The Replicon Connector for Microsoft Project is a powerful integration that creates a unified experience:

▶ Streamline project management

The bi-directional sync between Microsoft Project and Replicon ensures the right data is exchanged between the two applications, eliminating the need for manual double entry of data.

▶ Manage resources globally

Leverage Replicon's robust resource management capabilities to allocate resources across the organization while continuing to use Microsoft Project to manage project tasks and milestones.

▶ Accurately capture time spent on projects

Replicon's leading time tracking application provides an easy way for employees to enter project time while ensuring the right organizational approvals and validations are made to ensure accuracy and compliance.

▶ Improve budget-to-actual reporting

With current and accurate project time and cost data synced back to Microsoft Project, project managers are well equipped to track project costs against budgets and make needed adjustments more quickly.

Replicon Connector for Microsoft Project

Seamless integration for a unified project management experience

About Replicon

Replicon, the Time Intelligence™ company, has over 20 years of industry leadership and is pioneering a new approach to time management. Time Intelligence elevates time as a strategic asset within an organization, to improve operational productivity, performance, and profitability.

Replicon's Time Intelligence Platform offers solutions for global time and gross pay compliance, enterprise time management for ERP, professional services automation, and an SDK for continued development - expanding the company's award-winning portfolio of cloud-based products, including complete solution sets for client billing, project costing, and time and attendance.

Replicon supports thousands of customers across 70 countries, with over 400 employees around the globe including the United States, Canada, India, Australia, and the United Kingdom.

Key Integration Capabilities

The Replicon Connector for Microsoft Project provides seamless integration that lessens the burden on project managers and increases the value of your organization's investment in Microsoft Project.

▶ Auto-create Projects and Tasks in Replicon

With a simple click within Microsoft Project, project managers can automatically sync the projects and tasks in Microsoft Project over to Replicon.

▶ Sync project time back to Microsoft Project

All project time entered by employees in Replicon is seamlessly synced back to Microsoft Project to ensure the most current and accurate information is available to project managers.

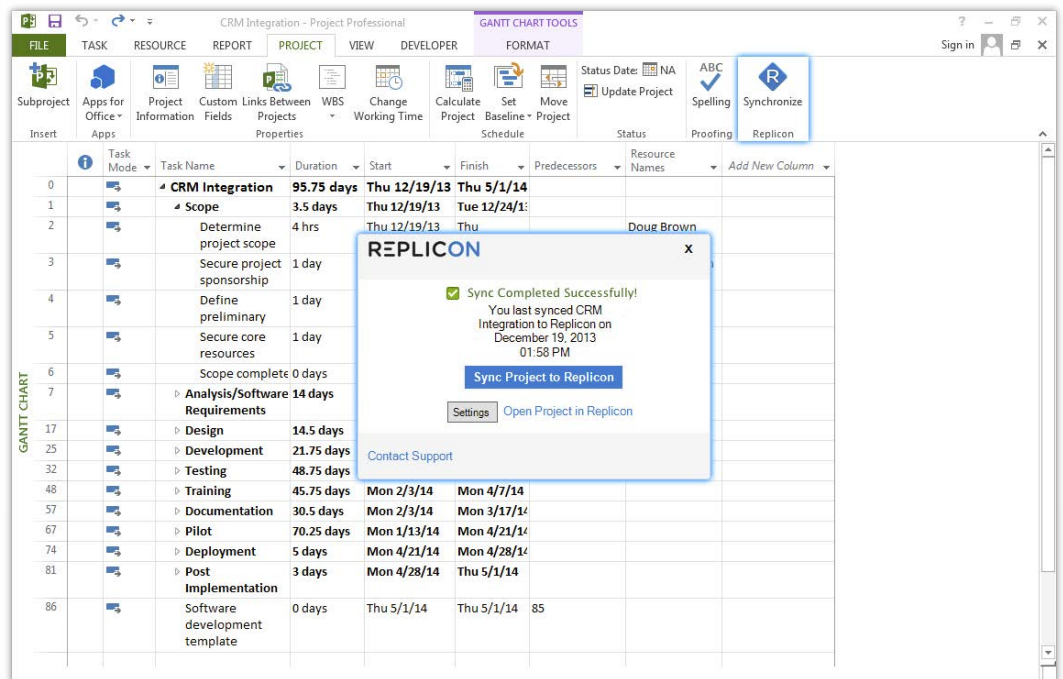

▶ Sync Resource Assignments to Replicon

By syncing, project managers also transfer any resources assigned to tasks in Microsoft Project to Replicon, allowing organizations to leverage Replicon's resource management capabilities.

▶ Turnkey, pre-built, and easy to implement

The Replicon Connector for Microsoft Project is pre-built and easy to implement for fast time-to-value.

▶ Compatible with Microsoft Project 2010 and 2013

Synchronizing projects, time, and resource data between Microsoft Project and Replicon is just an easy click away.
